Dates shown on reprints

Reprints dated at last amendment All reprints produced on or after 1 July 2002, hard copy and electronic, are dated as at the last date of amendment. Previously reprints were dated as at the date of publication. If a hard copy reprint is dated earlier than an electronic version published before 1 July 2002, it means the legislation was not further amended and the reprint date is the commencement of the last amendment.

If the date of a hard copy reprint is the same as the date shown for an electronic version previously published, it merely means that the electronic version was published before the hard copy version. Also, any revised edition of the previously published electronic version will have the same date as that version.

Replacement reprint date If the date of a hard copy reprint is the same as the date shown on another hard copy reprint it means that one is the replacement of the other.

Revised edition indicates further material has affected existing material. For example—

- a correction
- a retrospective provision
- other relevant information.

PART 3—DECLARED MANAGEMENT INTENT**7 Significance**

Presumed extinct wildlife are an irreplaceable feature of Queensland's biodiversity and a vital component of the national and global ecosystem representing—

- (a) biota of inherent value and potential importance for the maintenance of ecosystem processes; and

- (c) a genetic resource of potential benefit to society.

8 Proposed management intent

The proposed management intent for presumed extinct wildlife is as follows—

- (a) to establish a database of records and information about the wildlife and its habitat;
- (b) to monitor information about Queensland's wildlife resources, particularly about reported sightings of the wildlife;
- (c) to investigate reliable sightings of the wildlife;
- (d) to establish formal communication with the Commonwealth and other State agencies about a national conservation status for the wildlife and its habitat;
- (e) if presumed extinct wildlife is known to survive outside the wild—to consider developing a plan or outline that may lead to re-establishing the wildlife in the wild;
- (f) to start education programs for the community and managers of public land on extinction processes and threatened species conservation and habitat;
- (g) if presumed extinct wildlife is found to still exist in the wild—to treat the wildlife as endangered wildlife until it is included in schedule 2.

SCHEDULE 1 (continued)

9 Principles for the taking and use of presumed extinct wildlife

If presumed extinct wildlife is found to still exist in the wild, the taking and use of the wildlife may be permitted only—

PART 3—DECLARED MANAGEMENT INTENT**15 Significance**

Endangered wildlife are a significant component of Queensland's biodiversity and a vital feature of the national and global ecosystem representing—

- (a) biota of inherent value and potential importance for the maintenance of ecosystem processes; and
- (b) a source of genetic information integral to an understanding of the evolution of the Australian biota; and
- (c) a genetic resource of potential benefit to society.

16 Proposed management intent

The proposed management intent for endangered wildlife is as follows—

- (a) to establish a database of records and information about the wildlife;
- (b) as a priority, to put into effect recovery plans or conservation plans for the wildlife and its habitat;
- (c) to seek funding to help achieve the objectives of recovery plans and conservation plans;
- (d) to take action to ensure viable populations of the wildlife in the wild are preserved or re-established;

SCHEDULE 2 (continued)

- (e) to establish formal communications with the Commonwealth and other State agencies about the ongoing management and conservation status of endangered wildlife in Australia;
- (f) to start education programs for the community and managers of public land on extinction processes and threatened species conservation and habitat;
- (g) to regularly monitor and review the status of endangered wildlife and its habitat;
- (h) to encourage scientific research and inventory programs likely to contribute to an understanding of endangered wildlife and its habitat and management requirements;
- (i) to recognise that the habitat of endangered wildlife is likely to be a critical habitat or area of major interest;
- (j) to monitor and review the adequacy of environmental impact assessment procedures to ensure that they take into account the need to accurately assess the extent of the impact on endangered wildlife and develop effective mitigation measures.

17 Principles for the taking and use of endangered wildlife

PART 3—DECLARED MANAGEMENT INTENT**15 Significance**

Vulnerable wildlife are considered to be a valuable component of Queensland's biodiversity and an important feature of the national and global ecosystem representing—

- (a) biota of inherent value and potential importance for the maintenance of ecosystem processes; and
- (b) genetic information integral to an understanding of the evolution of the Australian biota; and
- (c) a genetic resource of potential benefit to society.

SCHEDULE 3 (continued)

16 Proposed management intent

The proposed management intent for vulnerable wildlife is as follows—

- (a) to establish a database of records and information about the wildlife and its habitat;
- (b) to put into effect recovery plans or conservation plans for the wildlife and its habitat;
- (c) to seek funding to help achieve the objectives of recovery plans and conservation plans;
- (d) to take action to ensure viable populations of the wildlife in the wild are preserved or established;
- (e) to establish formal communication with the Commonwealth and other State agencies about the ongoing management and conservation status of the wildlife throughout Australia;
- (f) to start education programs for the community and managers of public land on extinction processes and threatened species conservation and habitat;
- (g) to regularly monitor and review the status of the wildlife and its habitat;
- (h) to encourage scientific research programs likely to contribute to an understanding of the wildlife, its habitat and management requirements;
- (i) to recognise that the conservation of the habitat of vulnerable wildlife is critical to ensuring the survival of the wildlife;
- (j) to monitor and review the adequacy of environmental impact assessment procedures to ensure that they take into account the need to accurately assess the extent of the impact on vulnerable wildlife and develop effective mitigation measures.

17 Principles for the taking and use of vulnerable wildlife

The following are the principles for the taking and use of vulnerable wildlife under a licence, permit or other authority under the Act—

- (a) taking and use of the wildlife for exhibition purpose may be permitted only—

- (i) if it is for an approved captive breeding program and conducted under a recovery plan approved by the chief executive; or
- (ii) under a conservation plan;
- (b) taking and use of the wildlife for another purpose may be permitted only if—
 - (i) it is consistent with the management principles for the wildlife;⁵ and
 - (ii) it will not reduce the ability of the wildlife's population to expand.

⁵ The management principles are in section 73 of the Act.

PART 3—DECLARED MANAGEMENT INTENT**11 Significance**

Rare wildlife are an important part of Queensland's biodiversity and an integral component of the national and global ecosystem representing—

- (a) biota of inherent value and potential importance for the maintenance of ecosystem processes; and
- (b) a source of genetic information integral to an understanding of the evolution of the Australian biota; and
- (c) a genetic resource of potential benefit to society.

SCHEDULE 4 (continued)

12 Proposed management intent

The proposed management intent for rare wildlife is as follows—

- (a) to treat newly described plant species and vertebrate animals, or plant species or vertebrate animals reclassified as an identifiably different species, as rare wildlife until formal appraisal of its conservation status is complete;
- (b) to collate information about management requirements for the wildlife and its habitat;
- (c) to regularly monitor and review the wildlife's conservation status and its habitat;
- (d) to establish formal communication with the Commonwealth and other State agencies about the management and conservation status of the wildlife;
- (e) to encourage scientific research and inventory programs likely to contribute to the understanding of the wildlife, its habitat and management requirements;
- (f) if a significant threatening process is affecting the wildlife—to treat the wildlife as endangered or vulnerable wildlife until it is included in schedule 2 or 3;
- (g) to recognise the habitat of the wildlife as a potentially critical habitat or area of major interest;
- (h) to monitor and review the adequacy of environmental impact assessment procedures to ensure that they take into account the need to accurately assess the extent of the impact on rare wildlife and develop effective mitigation measures.

13 Principles for the taking and use of rare wildlife

The following are the principles for the taking and use of rare wildlife under a licence, permit or other authority under the Act—

- (a) taking and use of the wildlife for exhibition purposes may be permitted only if—
 - (i) it is for an approved captive breeding program; and

SCHEDULE 4 (continued)

- (ii) the taking and use is likely to result in a benefit to the wildlife in the wild;
- (b) taking and use of the wildlife for another purpose may be permitted only if—
 - (i) it is consistent with the management principles for the wildlife;⁶ and
 - (ii) it will not affect the survival of populations of the wildlife in the wild.

⁶ The management principles are in section 73 of the Act.
