Water Plan (Moreton) 2007

Part 1 Preliminary

1 Short title

This water plan may be cited as the *Water Plan (Moreton) 2007*.

2 Purposes of plan

The following are the purposes of this plan—

- (a) to define the availability of water in the plan area;
- (b) to provide a framework for sustainably managing water and the taking of water;
- (c) to identify priorities and mechanisms for dealing with future water requirements;
- (d) to provide a framework for reversing, where practicable, degradation that has occurred in natural ecosystems;
- (e) to provide a framework for—
 - (i) establishing water allocations to take surface water; and
 - (ii) granting and amending water entitlements for groundwater; and
 - (iii) granting water entitlements for overland flow water.

3 Definitions

The dictionary in schedule 15 defines particular words used in this plan.

Part 2 Plan area and water to which plan applies

4 Plan area

This plan applies to the area shown as the plan area on the map in schedule 1.

5 Groundwater management areas, implementation areas and groundwater units

- (1) Each part of the plan area that is within a groundwater management area shown on the map in schedule 2 is a groundwater management area for this plan.
- (2) Each of the following parts of the plan area that is within the Lockyer Valley groundwater management area and shown on the map in schedule 3 is an implementation area for this plan—
 - (a) Central Lockyer Creek (*implementation area 1*);
 - (b) Upper Lockyer Creek and Flagstone Creek (*implementation area 2A*);
 - (c) Tenthill Creek and Ma Ma Creek (*implementation area 2B*);
 - (d) Sandy Creek (parish of Blenheim) and Upper Laidley Creek (*implementation area 3*);
 - (e) Lower Lockyer Creek and Buaraba Creek (*implementation area 4*).
- (3) Implementation areas 2A, 2B, 3 and 4 consist of—
 - (a) alluvial aquifers (*groundwater unit 1*); and
 - (b) hard rock aquifers (*groundwater unit 2*).
- (4) Implementation area 1 consists of groundwater unit 1.

6 Subcatchment areas

Each part of the plan area that is within a subcatchment area shown on the map in schedule 4, and named in schedule 5, is a subcatchment area for this plan.

6A Trading zones

- (1) Each zone shown on the map in schedule 5A, part 1 is a trading zone for surface water to which this plan applies, other than surface water in the Central Lockyer Valley water supply scheme.
- (2) Each zone shown on the map in schedule 5A, part 2 is a trading zone for surface water in the Central Lockyer Valley water supply scheme.
- (3) Each zone shown on the map in schedule 5A, part 3 is a trading zone for groundwater in the Central Lockyer Valley water supply scheme.
- (4) A trading zone for surface water includes—
 - (a) each part of a watercourse, lake or spring that is in the zone; and
 - (b) those sections of tributaries from which there is access to flow or pondage from a watercourse or lake in the zone.
- (5) A trading zone for groundwater includes the part of a groundwater management area that is in the zone.

7 Information about areas

- (1) The exact location of the boundaries on maps shown in schedules 1 to 4 and 5A is held in digital electronic form by the department.
- (2) The information held in digital electronic form can be reduced or enlarged to show the details of the boundaries.

Editor's note—

The boundary locations in digital electronic form may be inspected at the department's offices at the Gatton Research Station, Warrego Highway, Gatton.

8 Nodes

- (1) A node mentioned in this plan is a place—
 - (a) on a watercourse in the plan area; and
 - (b) for which environmental flow objectives are set for performance indicators.
- (2) The location of each node is shown on the map in schedule 1 and described in schedule 6.
- (3) Each node is identified on the map by a letter.

9 Water to which plan applies

- (1) This plan applies to the following water (*surface water*) in the plan area—
 - (a) water in a watercourse or lake;
 - (b) water in springs not connected to groundwater.
- (2) This plan also applies to the following water in the plan area—
 - (a) groundwater, other than groundwater to which the *Water Plan (Great Artesian Basin and Other Regional Aquifers) 2017* applies;
 - (b) overland flow water, other than water in springs connected to groundwater.

Part 3 **Outcomes for sustainable management of water**

10 **Outcomes for water in plan area**

Water is to be allocated and sustainably managed in a way that—

- (a) recognises the natural state of watercourses, lakes and springs has changed because of water infrastructure, flow supplementation and the taking of water; and
- (b) seeks to achieve a balance in the following outcomes—
 - (i) the general outcomes mentioned in section 11;
 - (ii) the ecological outcomes mentioned in section 12.

11 **General outcomes**

- (1) Each of the following is a general outcome for surface water in the plan area—
 - (a) to provide for additional water to be taken from the plan area for future water requirements;
 - (b) to protect the probability of taking water under water entitlements;
 - (c) to provide options for water users to implement their own provisions for security of supply;
 - (d) to provide for the continued use of all water entitlements and other authorisations to take or interfere with water in the plan area;
 - (e) to encourage the efficient use of water;
 - (f) to ensure water is available for essential services;
 - (g) to achieve ecological outcomes consistent with supporting natural ecosystems by minimising changes to natural flow regimes;

- (h) to allow water-related cultural use of parts of the plan area by the traditional owners of the area;
 - (i) to provide consistency between this plan and the SEQ regional plan.
- (2) Each of the following is a general outcome for groundwater in the plan area—
- (a) to provide for the continued use of all water entitlements and other authorisations to take or interfere with groundwater in the plan area;
 - (b) to encourage the efficient use of the water;
 - (c) to maintain long-term water quality;
 - (d) to protect, as far as practicable, baseflow to watercourses that support natural ecosystems;
 - (e) to allow water-related cultural use of parts of the plan area by the traditional owners of the area;
 - (f) to provide consistency between this plan and the SEQ regional plan.
- (3) Each of the following is a general outcome for overland flow water in the plan area—
- (a) to provide for the continued use of existing overland flow works;
 - (b) to encourage the efficient use of the water;
 - (c) to support natural ecosystems by minimising changes to natural flow regimes;
 - (d) to maintain run-off to achieve the general outcomes for surface water;
 - (e) to provide consistency between this plan and the SEQ regional plan.
- (4) Each of the following is a general outcome for surface water and groundwater in the Central Lockyer Valley water supply scheme—

-
- (a) to support long-term agricultural productivity and investment and the financial security of people who use the water for agriculture;
 - (b) to recognise the different contributions that natural recharge and recharge through infrastructure make to the availability of groundwater, to inform future allocations and support agricultural businesses;
 - (c) to increase information held about the water, through the collection and analysis of relevant information about the water, to support future decision making and improvements in this plan;
 - (d) to provide opportunities for initiatives that allow additional water to become available through the coordinated storage, management and delivery of the water, for future agricultural purposes.
- (5) In this section—
- relevant information*, about water, means—
- (a) trends in the levels of the groundwater; and
 - (b) the volume of groundwater used; and
 - (c) the recharge characteristics of the groundwater; and
 - (d) the quality of the groundwater.

12 Ecological outcomes

- (1) Particular ecological outcomes for water in the part of the plan area stated for the outcome are as follows—
 - (a) for Stanley River and tributaries, upstream of the impounded area of Woodford Weir—
 - (i) to minimise changes to flows that support river-forming processes; and
 - (ii) to minimise changes to the low flow regime;
 - (b) for Boondall Wetlands—to provide freshwater flows necessary to maintain the long-term pattern of inflows to, and ecological functions of, the wetlands;

[s 12A]

- (c) for estuarine reaches—to minimise changes to brackish water habitats;
 - (d) for Moreton Bay and Pumicestone Channel—to minimise changes to the natural movement and delivery of sediment, and the delivery of fresh water, natural nutrients and organic matter.
- (2) In this section—
- impounded area*, of Woodford Weir, means the area of the weir that is inundated when the weir is at its full supply level.

Part 3A Measures for achieving water plan outcomes

12A Measures that contribute to achieving particular water plan outcomes

- (1) Measures that contribute to achieving the water plan outcomes stated in section 11(2) and (4) are—
- (a) the development, before this plan expires, by the chief executive in consultation with Seqwater and water users, of a new model for the management and allocation of groundwater in groundwater unit 1 in implementation area 1; and
 - (b) the collection and analysis of relevant information about groundwater in the part of groundwater unit 1 in implementation area 1—
 - (i) for groundwater that is not in the Central Lockyer Valley water supply scheme—by the chief executive to help the chief executive make decisions about the sustainable management of groundwater use and the protection of groundwater aquifers in the area mentioned in that subsection; and
 - (ii) for groundwater in the Central Lockyer Valley water supply scheme—by a resource operations

licence holder to help the licence holder make decisions about the sustainable management of groundwater use and the protection of groundwater aquifers in the area mentioned in that subsection.

- (2) The information collected, and analysis of the information, mentioned in subsection (1)(b)(i) is research and monitoring for the *Water Regulation 2016*, section 22(4)(d).
- (3) In this section—
relevant information, about groundwater, means—
 - (a) trends in the levels of the groundwater; and
 - (b) the volume of groundwater used; and
 - (c) the recharge characteristics of the groundwater; and
 - (d) the quality of the groundwater.

Part 4 Performance indicators and objectives

Division 2 Environmental flow objectives

13 Application of division

This division applies to surface water.

14 Performance indicators for environmental flow objectives

The performance indicators for the environmental flow objectives are—

- (a) for assessing periods of low flow—
 - (i) 50% daily flow; and
 - (ii) 90% daily flow; and
 - (iii) daily flow less than 1ML; and

[s 15]

- (iv) number of periods of no flow of at least 1 month but less than 3 months; and
- (v) number of periods of no flow of at least 3 months but less than 6 months; and
- (vi) number of periods of no flow of at least 6 months; and
- (b) for assessing periods of medium to high flow—
 - (i) mean annual flow; and
 - (ii) 1.5 year daily flow volume; and
 - (iii) 5 year daily flow volume; and
 - (iv) 20 year daily flow volume; and
- (c) for assessing seasonal flow patterns—
 - (i) flow regime class; and
 - (ii) annual proportional flow deviation.

15 Environmental flow objectives

The environmental flow objectives for this plan are stated in schedule 7.

Division 3 Water allocation security objectives

15A Application of division

This division applies to surface water and groundwater.

16 Performance indicators for water allocation security objectives

The performance indicators for the water allocation security objectives are—

- (a) for a water allocation to take supplemented water—the monthly supplemented water sharing index; and

- (b) for a water allocation to take unsupplemented water in a class A, B, C, D or E water allocation group—70% unsupplemented water sharing index; and
- (c) for a water allocation to take supplemented groundwater in a zone—the maximum allowable volume for the zone for the water allocation’s priority group.

17 Water allocation security objectives

The water allocation security objectives for this plan are stated in schedule 8.

Part 5 Strategies for achieving outcomes (surface water)

Division 1 Preliminary

18 Strategies for surface water

This part—

- (a) applies to surface water; and
- (b) states the strategies for achieving the outcomes mentioned in part 3.

Division 2 Decisions about surface water made under this plan

19 Application of div 2

This division applies to decisions about the allocation or management of surface water in the plan area, other than a decision—

- (a) about reinstating or replacing an expired water licence;
or

- (b) to grant a water entitlement to a local government, government agency or the bulk water supply authority for supply under operations or water infrastructure that were in existence on the commencement of this plan.

20 Decisions about surface water must be consistent with objectives

Decisions about the allocation or management of surface water in the plan area, other than a decision about a water permit, must be consistent with—

- (a) the environmental flow objectives for surface water stated in schedule 7; and
- (b) the water allocation security objectives for surface water stated in schedule 8.

21 Assessing impact of decisions about surface water

- (1) The IQQM computer program's simulation for the simulation period is used to assess consistency with the objectives for surface water.
- (2) If it is not practicable to use the IQQM computer program, another assessment method approved by the chief executive may be used.
- (3) The chief executive may approve an assessment method for subsection (2) only if the chief executive is satisfied the method will assess consistency with the objectives at least as accurately as the IQQM computer program.

22 Decisions about surface water not to increase amount of water taken

- (1) The chief executive must not make a decision about the management or allocation of surface water that would increase the average volume of surface water available to be taken in the plan area.
- (2) Subsection (1) does not apply to a decision—

- (a) about unallocated water made under section 25; or
 - (b) about a water permit.
- (3) For subsection (1), a decision includes a decision about an application for an authorisation to take water made but not dealt with before the commencement of this plan.

23 Restriction on taking water from waterholes or lakes

- (1) The chief executive may grant an authorisation to take water from a waterhole or lake only if—
- (a) the chief executive imposes a condition on the authorisation about maintaining the cultural or environmental values of the waterhole or lake; or
 - (b) the chief executive is satisfied the taking of the water will not adversely affect the cultural and environmental values of the waterhole or lake.

Example for paragraph (a)—

a condition that the water may be taken only if the water level in the waterhole or lake is above the level that is 0.5m below the level at which the waterhole or lake naturally overflows

- (2) In making a decision under subsection (1), the chief executive must consider—
- (a) the impact the proposed taking of the water may have on the following—
 - (i) water quality;
 - (ii) brackish water habitats in estuarine reaches;
 - (iii) inundation of habitats;
 - (iv) the movement of fish and other aquatic species;
 - (v) the natural movement and delivery of sediment, and the delivery of fresh water, natural nutrients or organic matter, to Moreton Bay or Pumicestone Channel;
 - (vi) recreation and aesthetic values;

[s 24]

- (vii) cultural values including, for example, cultural values of the traditional owners of the area; and
- (b) whether the proposed taking is likely to have a direct adverse effect on groundwater flows.
- (3) An authorisation mentioned in subsection (1) does not include a water allocation converted from an authorisation under division 7.
- (4) Subsection (1) does not limit the restrictions that may be imposed on the taking of water from a waterhole or lake.
- (5) Subsection (2) does not limit the matters the chief executive may consider.

Division 3 Unallocated water

24 Unallocated water held as general reserve or strategic reserve

- (1) Unallocated water in the plan area is held as a general reserve or strategic reserve and dealt with under this division.
- (2) For section 43(1)(c) of the Act, the volume of unallocated water held as reserves under subsection (1) is 100ML.

24A Processes for releasing unallocated water—Act, s 43

- (1) For section 43(2)(f) of the Act, the processes for releasing unallocated water reserved under this division are the processes stated in the *Water Regulation 2016*, part 2, division 2, subdivision 2.
- (2) In preparing and implementing a process for releasing unallocated water under subsection (1), the chief executive must consider the matters stated in the water management protocol.

25 Granting unallocated water

- (1) Unallocated water may be granted only—
 - (a) for infrastructure for a project declared under the *State Development and Public Works Organisation Act 1971*, section 26, to be a coordinated project; or
 - (b) for infrastructure identified for—
 - (i) the SEQ regional plan; or
 - (ii) a regional water security program; or
 - (c) for a community facility; or
 - (d) for a small scale commercial enterprise; or
 - (e) under a process in the water management protocol.
- (2) In this section—

community facility includes—

 - (a) a public recreational facility; or
 - (b) a sporting facility; or
 - (c) another facility used by a not for profit organisation.

26 Matters chief executive must consider

- (1) In dealing with unallocated water, the chief executive must consider—
 - (a) the need for, and efficiency of, current and proposed uses of water including—
 - (i) the extent to which water is being taken under authorisations in the plan area; and
 - (ii) emerging requirements for additional water, in and outside the plan area, and the likely timeframe in which the additional water will be required; and
 - (iii) alternative water sources including, for example, recycled water and water savings from improvements in the efficiency of water use; and

- (b) the availability of an alternative water supply for the purpose for which the water is required; and
 - (c) the impact the proposed taking of or interfering with the water may have on the following—
 - (i) water quality;
 - (ii) brackish water habitats in estuarine reaches;
 - (iii) inundation of habitats;
 - (iv) the movement of fish and other aquatic species;
 - (v) the natural movement and delivery of sediment, and the delivery of fresh water, natural nutrients or organic matter, to Moreton Bay or Pumicestone Channel;
 - (vi) recreation and aesthetic values;
 - (vii) cultural values, including, for example, cultural values of the traditional owners of the area; and
 - (d) whether the proposed taking or interfering with, or the proposed use of, the water is likely to—
 - (i) have a direct adverse effect on groundwater; or
 - (ii) lead to degradation, including salinity, of land or downstream watercourses; and
 - (e) whether the proposed use of the water is consistent with—
 - (i) the SEQ regional plan; and
 - (ii) any system operating plan applying to the plan area; and
 - (iii) any regional water security program for the SEQ region.
- (2) Subsection (1) does not limit the matters the chief executive may consider.

Division 5 Resource operations licences

36 Water entitlements to be managed under resource operations licences

Water allocations for the following water supply schemes are to be managed under the resource operations licence for the scheme—

- (a) Central Lockyer Valley water supply scheme;
- (b) Lower Lockyer Valley water supply scheme;
- (c) Warrill Valley water supply scheme.

37 Deciding operating arrangements and supply requirements

(1) In deciding the operating arrangements and supply requirements for water infrastructure and proposed water infrastructure under the resource operations licence for each water supply scheme mentioned in section 36, the chief executive must consider—

- (a) the impact of the infrastructure's or proposed infrastructure's operation on the following—
 - (i) the water allocation security objectives;
 - (ii) water quality;
 - (iii) brackish water habitats in estuarine reaches;
 - (iv) instream water levels;
 - (v) erosion of the bed and banks of watercourses;
 - (vi) riparian vegetation;
 - (vii) the extent to which artificial variations in instream water levels and flows may adversely affect natural ecosystems;
 - (viii) recreation and aesthetic values of the plan area;

[s 38]

- (ix) cultural values, including, for example, cultural values of the traditional owners of the plan area; and
 - (b) the impact of the infrastructure or proposed infrastructure on the movement of fish and other aquatic species; and
 - (c) the impact of the transfer of water between watercourses; and
 - (d) the likelihood of fish deaths caused by the operation of the infrastructure; and
 - (e) the joint operation of existing and proposed infrastructure; and
 - (f) any system operating plan applying to the plan area; and
 - (g) any regional water security program for the SEQ region.
- (2) Subsection (1) does not limit the matters the chief executive may consider.

Division 6 Water entitlements

38 Authorising existing taking of water from Morton Vale Pipeline zone

- (1) The chief executive must grant 2 water allocations to the bulk water supply authority to take surface water from the Morton Vale Pipeline zone.
- (2) The first water allocation—
 - (a) must state a nominal volume of 3,507ML; and
 - (b) belongs to the medium priority B group.
- (3) The second water allocation—
 - (a) must state a nominal volume of 185ML; and
 - (b) belongs to the high priority group.

39 Matters for chief executive to consider

- (1) This section applies to the chief executive in deciding the water allocation dealing rules to be included in the water management protocol for the water allocation granted under section 38(1).
- (2) The chief executive must consider existing water use agreements and supply contracts between the bulk water supply authority and water users.
- (3) Subsection (2) does not limit the matters the chief executive may consider.

Division 7 Converting authorisations to water allocations

Subdivision 1 General

40 Purpose of division

This division states, for section 43(2)(g) of the Act, the arrangements and process for converting, under a water entitlement notice for this plan, particular authorisations to water allocations.

41 Authorisations may be converted to water allocations

A water entitlement notice may, under section 70(1)(a) of the Act, implement this plan by providing for an authorisation to take surface water from the Central Lockyer Valley water supply scheme to be converted to a water allocation to take surface water from the Central Lockyer Valley water supply scheme.

43

44 Location for taking water

The location for taking water stated on a water allocation must include the place at which water could have been taken under the authorisation.

45 Purpose to be stated on water allocation

The purpose stated on a water allocation must be—

- (a) if the purpose stated on the authorisation is ‘distribution loss’—‘distribution loss’; or
- (b) otherwise—‘any’.

Subdivision 2 Water allocations for taking supplemented water

46 Nominal volume for water allocation

The nominal volume for a water allocation to take supplemented water is—

- (a) if the authorisation states an annual volume—the stated volume; or
- (b) if the authorisation is an interim water allocation to take supplemented water in the Central Lockyer Valley water supply scheme that states an area that may be irrigated—the volume decided by the chief executive having regard to the volume of water required to efficiently irrigate the area, but not more than the volume, expressed in megalitres, calculated by multiplying the area, in hectares, by 3.4.

47 Priority groups

- (1) In the Central Brisbane River, Pine Valleys and Stanley River water supply schemes, a water allocation to take supplemented water belongs to—

- (a) for an authorisation to take water that states a volumetric limit—the medium priority group; and
 - (b) for an authorisation to take water for water harvesting purposes in the Central Brisbane River water supply scheme—the medium priority group; and
 - (c) for other authorisations—the high priority A group.
- (2) In the Central Lockyer Valley water supply scheme, a water allocation to take surface water belongs to—
- (a) for a water allocation to take surface water from the Morton Vale Pipeline zone—the medium priority B group or the high priority group; or
 - (b) for a water allocation to take surface water from a zone other than the Morton Vale Pipeline zone—the medium priority C group.
- (3) In the Cressbrook Creek water supply scheme, a water allocation to take supplemented water belongs to the high priority A group.
- (4) In the Lower Lockyer Valley water supply scheme, a water allocation to take supplemented water belongs to the medium priority group.
- (5) In the Warrill Valley water supply scheme, a water allocation to take supplemented water belongs to the medium priority group or the high priority C group.
- (6) In the Caboolture River, a water allocation to take supplemented water belongs to the high priority B group.

Subdivision 3 Water allocations for taking unsupplemented water

48 Elements of a water allocation

A water allocation to take unsupplemented water must state—

- (a) the maximum rate at which water may be taken under the allocation; and

- (b) the annual volumetric limit for the allocation.

49 Nominal volume for water allocation

In deciding the nominal volume for a water allocation to take unsupplemented water, the chief executive—

- (a) must consider, for each authorisation—
 - (i) the local availability of water; and
 - (ii) the conditions under which water may be taken under the authorisation; and
 - (iii) the volume of water required to efficiently irrigate the area being irrigated under the authorisation; and
 - (iv) the water taking capacity of any works, in existence on the commencement of this plan, for taking water under the authorisation; and
 - (v) the annual volumes of water estimated by the chief executive to have been taken under the authorisation during the period, of not more than 10 years, immediately before the commencement of this plan; and
 - (vi) the efficiency of the use of the water mentioned in subparagraph (v); and
- (b) must ensure the following—
 - (i) for all authorisations in a class A water allocation group in a subcatchment area mentioned in schedule 10, column 1—the simulated mean annual diversion for the water allocation group is not more than the volume stated in column 2 of the schedule for the subcatchment area;
 - (ii) for all authorisations in a class B water allocation group in a subcatchment area mentioned in schedule 10, column 1—the simulated mean annual diversion for the water allocation group is

not more than the volume stated in column 3 of the schedule for the subcatchment area;

- (iii) for all authorisations in a class C water allocation group in a subcatchment area mentioned in schedule 10, column 1—the simulated mean annual diversion for the water allocation group is not more than the volume stated in column 4 of the schedule for the subcatchment area;
- (iv) for all authorisations in a class D water allocation group in a subcatchment area mentioned in schedule 10, column 1—the simulated mean annual diversion for the water allocation group is not more than the volume stated in column 5 of the schedule for the subcatchment area;
- (v) for all authorisations in a class E water allocation group in a subcatchment area mentioned in schedule 10, column 1—the simulated mean annual diversion for the water allocation group is not more than the volume stated in column 6 of the schedule for the subcatchment area.

50 Annual volumetric limit for water allocation

- (1) The annual volumetric limit for a water allocation to take unsupplemented water is—
 - (a) if the authorisation states an annual volume of water—the stated volume; and
 - (b) if the authorisation does not state an annual volume of water—the volume decided by the chief executive having regard to—
 - (i) the conditions under which water may be taken under the authorisation; and
 - (ii) the water taking capacity of any works, being used or authorised to be used, for taking water under the authorisation; and

[s 52]

- (iii) the annual volumes of water estimated by the chief executive to have been taken under the authorisation during the period, of not more than 10 years, immediately before the commencement of this plan; and
 - (iv) the efficiency of the use of the water mentioned in subparagraph (iii).
- (2) Subsection (1)(b) does not limit the matters the chief executive may consider.

52 Maximum rates

The maximum rate at which unsupplemented water may be taken under a water allocation is—

- (a) if the authorisation states a maximum rate—the stated rate; and
- (b) if the authorisation does not state a maximum rate but a related development permit states a pump size mentioned in schedule 11, column 1—
 - (i) if the authorisation holder satisfies the chief executive that the actual rate at which water can be taken is different from the rate stated in schedule 11, column 2, for the pump size—the rate decided by the chief executive having regard to—
 - (A) the conditions under which water may be taken; and
 - (B) the water taking capacity of the pump to which the development permit relates (the *existing pump*) under normal operating conditions; and
 - (C) the irrigation or water distribution system related to the existing pump during the period of not more than 10 years immediately before the commencement of this plan; and

-
- (D) the efficiency of the irrigation or water distribution system mentioned in subsubparagraph (C); or
 - (ii) otherwise—the rate stated in schedule 11, column 2, for the pump size; and
 - (c) if the authorisation does not state a maximum rate but a related development permit states a pump size other than a pump size mentioned in schedule 11, column 1—the rate decided by the chief executive having regard to the matters mentioned in paragraph (b)(i)(A) to (D); and
 - (d) if paragraphs (a) to (c) do not apply—the rate decided by the chief executive having regard to—
 - (i) the nature of the authorisation; and
 - (ii) an estimate of the rate, or measurement of the actual rate, at which water is taken under the authorisation.

53 Conditions

In deciding the conditions under which water may be taken under a water allocation to take unsupplemented water, the chief executive must have regard to the conditions stated on the authorisation.

54 Water allocation groups

A water allocation to take unsupplemented water belongs to—

- (a) for an authorisation, or part of an authorisation, to take water for irrigation purposes or that the chief executive decides is for irrigation purposes—a class A water allocation group; or
- (b) for an authorisation to take unsupplemented water in any of the following areas—a class B water allocation group—
 - (i) Central Brisbane River water supply scheme;

- (ii) Central Lockyer Valley water supply scheme;
- (iii) Lower Lockyer Valley water supply scheme;
- (iv) Pine Valleys water supply scheme;
- (v) Stanley River water supply scheme;
- (vi) Warrill Valley water supply scheme; or
- (c) for an authorisation to take unsupplemented water other than from a water supply scheme for water harvesting purposes or that the chief executive decides is for water harvesting purposes—a class C water allocation group; or
- (d) for an authorisation for town water supply purposes—a class D water allocation group; or
- (e) for any other authorisation—a class E water allocation group.

Division 8 Water licences for taking unsupplemented water

55 Elements of a water licence

A water licence to take unsupplemented water must state—

- (a) an annual volumetric limit; and
- (b) the maximum rate at which water may be taken under the water licence during a particular period of time or in particular circumstances; and
- (c) a purpose of ‘any’.

56 Amending water licences

- (1) This section applies to a water licence to take unsupplemented water in force on the commencement of this plan.
- (2) The licence may be amended to state the following—

- (a) the purpose for which water may be taken under the licence;
- (b) the annual volumetric limit for the licence;
- (c) the maximum rate at which water may be taken under the licence;
- (d) the flow conditions for the licence;
- (e) any other conditions decided by the chief executive.

57 Annual volumetric limit for water licence

The annual volumetric limit to take unsupplemented water for a water licence mentioned in section 56(1) is the annual volumetric limit mentioned in section 50 or decided by the chief executive under that section as if the water licence were a water allocation.

58 Maximum rates

The maximum rate at which unsupplemented water may be taken under a water licence mentioned in section 56(1) is the maximum rate mentioned in section 52 or decided by the chief executive under that section as if the water licence were a water allocation.

Division 10 Miscellaneous

61 Releasing water through fish ways

If water to which this plan applies can be released from a dam or weir through fish ways, each resource operations licence must include environmental management rules for the release of the water.

Part 6 Strategies for achieving outcomes (groundwater)

Division 1 Preliminary

62 Strategies for groundwater

This part—

- (a) applies only to groundwater; and
- (b) states the strategies for achieving the outcomes mentioned in part 3.

Division 1A Decisions about groundwater made under this plan

62A Application of division

This division applies to decisions about the allocation or management of groundwater to which this plan applies.

62B Decision about groundwater to be consistent with objectives

A decision about the allocation or management of groundwater to which this plan applies, other than a decision about a water permit, must be consistent with the water allocation security objectives stated in section 17.

Division 2 Cressbrook Creek alluvial groundwater management area

63 Limitation on taking groundwater—Act, s 101

A person may not take groundwater in the Cressbrook Creek alluvial groundwater management area (the *management area*) other than—

- (a) for stock or domestic purposes; or
- (b) under a water entitlement or water permit; or
- (c) to allow monitoring or salinity control.

64 Decisions about taking groundwater

- (1) The chief executive must not make a decision, about the allocation or management of groundwater in the management area, that would increase the average volume of groundwater that may be taken in the management area.
- (2) A decision mentioned in subsection (1) includes a decision about an application for a water licence, made but not decided before the commencement of this plan.
- (3) Subsections (1) and (2) do not apply to a decision—
 - (a) about a water permit; or
 - (b) about reinstating or replacing an expired water licence; or
 - (c) about water sharing rules.

65 Amending water licences to take groundwater

- (1) This section applies to a water licence to take groundwater in force on the commencement of this plan.
- (2) The chief executive may amend the water licence to state—
 - (a) an annual volumetric limit for the licence; and
 - (b) any other condition decided by the chief executive.

- (3) In deciding the annual volumetric limit for a water licence, the chief executive must have regard to—
- (a) the water taking capacity of any works, in existence on the commencement of this plan, for taking water under the water licence; and
 - (b) the annual volumes of groundwater estimated by the chief executive to have been taken during the period, of not more than 10 years, immediately before the commencement of this plan; and
 - (c) the efficiency of the use of the water mentioned in paragraph (b); and
 - (d) the impact the taking of groundwater under the water licence has on the flow of surface water; and
 - (e) data collected by the chief executive about groundwater levels; and
 - (f) whether the amount of water to be taken under the water licence is consistent with the outcomes mentioned in part 3 and the objectives of this plan.

Division 3 Lockyer Valley groundwater management area

Subdivision 1 General strategies

66 Limitation on taking groundwater—Act, s 101

A person may not take groundwater in the Lockyer Valley groundwater management area (the *management area*) other than—

- (a) for stock or domestic purposes; or
- (b) under a water entitlement or water permit; or
- (c) to allow monitoring or salinity control; or
- (d) under an authorisation under section 72.

67 Decisions about taking groundwater

- (1) The chief executive must not make a decision, about the allocation or management of groundwater in the management area, that would increase the average volume of groundwater that may be taken in the management area.
- (2) A decision mentioned in subsection (1) includes a decision about an application for a water licence, made but not decided before the commencement of this plan.
- (3) Subsections (1) and (2) do not apply to a decision—
 - (a) about a water permit; or
 - (b) about reinstating or replacing an expired water licence; or
 - (c) about water sharing rules.

Subdivision 2 Implementation area 1

68 Supplemented and unsupplemented groundwater areas

- (1) Groundwater unit 1 in implementation area 1 consists of—
 - (a) the supplemented groundwater area; and
 - (b) the unsupplemented groundwater area.

Note—

See subdivision 4 (Water sharing rules) for the process for managing groundwater in the unsupplemented groundwater area.

- (2) The supplemented groundwater area is supplemented by the release of surface water from the Central Lockyer Valley water supply scheme.

Subdivision 3 Implementation areas 2A, 2B, 3 and 4

70 Implementation areas 2A, 2B and 3

Groundwater unit 1 in implementation area 2A, 2B or 3 consists of the unsupplemented groundwater area.

Note—

See subdivision 4 (Water sharing rules) for the process for managing groundwater in the unsupplemented groundwater area.

72 Continued taking of groundwater authorised

- (1) An owner of land in implementation area 2A, 2B, 3 or 4 who, on the commencement of this plan, is using an existing water bore on the land to take groundwater may continue to take groundwater using the bore.
- (2) If the chief executive is reasonably satisfied the outcomes mentioned in part 3 or the objectives mentioned in part 4 are not being achieved, the chief executive may, under section 116 of the Act, grant a water licence to the owner to take groundwater using the bore.
- (3) The water licence must state an annual volumetric limit for the licence.

73 Granting water licences

- (1) This section applies if, under section 36 of the Act, a chief executive's notice requires the owner of land in implementation area 2A, 2B, 3 or 4 on which there are existing works for taking water to notify the chief executive of the works and the water use.
- (2) After the chief executive receives the notice, the chief executive may, under section 116 of the Act, grant a water licence to the owner to continue to take groundwater using the works.

- (3) For groundwater unit 2, the water licence must state an annual volumetric limit for the licence.
- (4) In deciding the annual volumetric limit for the water licence for groundwater unit 2, the chief executive must have regard to—
 - (a) the water taking capacity of the works; and
 - (b) the annual volume of groundwater estimated by the chief executive to have been taken during the period, of not more than 10 years, immediately before the commencement; and
 - (c) the efficiency of the use of the water mentioned in paragraph (b); and
 - (d) data collected by the chief executive about groundwater levels; and
 - (e) whether the amount of water to be taken under the licence is consistent with the outcomes mentioned in part 3 and the objectives of this plan.

Subdivision 4 Water sharing rules

74 Water sharing rules for unsupplemented groundwater

- (1) The water management protocol must contain water sharing rules for the unsupplemented groundwater in groundwater unit 1 in the management area.
- (2) In developing the water sharing rules for the management area, the chief executive must consult with water users and water service providers in the area.

Subdivision 5 Amending water licences

75 Amending water licences to state an annual volumetric limit

- (1) This section applies if the chief executive is reasonably satisfied the water sharing rules for an implementation area are not achieving the outcomes mentioned in part 3 or the objectives of this plan.
- (2) The chief executive may amend the water licences in the implementation area to state annual volumetric limits for the licences.

Division 4 Warrill-Bremer alluvial groundwater management area

76 Limitation on taking groundwater—Act, s 101

A person may not take groundwater in the Warrill-Bremer alluvial groundwater management area (the *management area*) other than—

- (a) for stock or domestic purposes; or
- (b) under a water entitlement or water permit; or
- (c) to allow monitoring or salinity control; or
- (d) under an authorisation under section 78.

77 Decisions about taking groundwater

- (1) The chief executive must not make a decision, about the allocation or management of groundwater in the management area, that would increase the average volume of groundwater that may be taken in the management area.
- (2) Subsection (1) does not apply to a decision—
 - (a) about a water permit; or

- (b) about water sharing rules; or
- (c) about taking groundwater for an allowable urban purpose.

78 Continued taking of groundwater authorised

- (1) An owner of land in the management area who, on the commencement of this plan, is using an existing water bore on the land to take groundwater may continue to take groundwater using the bore.
- (2) If the chief executive is reasonably satisfied the outcomes mentioned in part 3 or the objectives mentioned in part 4 are not being achieved, the chief executive may, under section 116 of the Act, grant a water licence to the owner to take groundwater using the bore.
- (3) The water licence must state an annual volumetric limit for the licence.

79 Granting water licences

- (1) This section applies if, under section 36 of the Act, a chief executive's notice requires the owner of land who is authorised under section 78(1) to take groundwater using an existing water bore to notify the chief executive of the bore and the water use.
- (2) After the chief executive receives the notice, the chief executive may, under section 116 of the Act, grant a water licence to the owner to take groundwater using the bore.
- (3) In deciding the annual volumetric limit for the licence, the chief executive must have regard to—
 - (a) the water taking capacity of the bore; and
 - (b) the annual volume of groundwater estimated by the chief executive to have been taken during the period, of not more than 10 years, immediately before the commencement; and

[s 80]

- (c) the efficiency of the use of the water mentioned in paragraph (b); and
- (d) the impact on surface water flows; and
- (e) data collected by the chief executive about groundwater levels; and
- (f) whether the amount of water to be taken under the licence is consistent with the outcomes mentioned in part 3 and the objectives of this plan.

80 Granting water licence to take groundwater for allowable urban purpose

- (1) The chief executive may grant a water licence to take groundwater for an allowable urban purpose using a bore.
- (2) The maximum rate at which groundwater may be taken under the water licence is 5L/sec.

Division 5 Watercourse buffer zone groundwater management area

81 Boundaries of watercourse buffer zone

The watercourse buffer zone groundwater management area (the *watercourse buffer zone*) consists of, for each watercourse or lake mentioned in schedule 12, column 1—

- (a) the reach of the watercourse or lake stated in column 2 of the schedule; and
- (b) the area between the high bank of the watercourse or lake and the setback distance stated in column 3 of the schedule.

82 Limitation on taking groundwater—Act, s 101

A person may not take groundwater in the watercourse buffer zone other than—

- (a) for stock or domestic purposes; or
- (b) to allow monitoring or salinity control; or
- (c) under an authorisation under section 83.

83 Continued taking of groundwater authorised

The owner of land in the watercourse buffer zone on which an existing water bore is situated may continue to take groundwater using the bore.

Division 6 Converting water licences to water allocations to take supplemented groundwater

Subdivision 1 Preliminary

84 Purpose of division

This division states, for section 43(2)(g) of the Act, the arrangements and process for converting, under a water entitlement notice for this plan, particular water licences to water allocations.

84A Definitions

In this division—

additional irrigable area see section 84M.

irrigable area see section 84K.

preliminary irrigable area see section 84L.

relevant period means the period that starts on 1 July 2007 and ends on 30 June 2018.

Subdivision 2 Water allocations

84B Water licences may be converted to water allocations

- (1) This section applies to a water licence to take supplemented groundwater from the Central Lockyer Valley water supply scheme for a purpose other than stock purposes or domestic purposes.
- (2) A water entitlement notice may, under section 70(1)(a) of the Act, implement this plan by providing for 1 or more of the water licences to be converted to 1 or more water allocations to take supplemented groundwater from the Central Lockyer Valley water supply scheme.

84C Location for taking water

The location from which water may be taken under a water allocation converted from 1 or more water licences must be a location—

- (a) from which water could have been taken under—
 - (i) for a water allocation converted from 1 water licence—the water licence; or
 - (ii) for a water allocation converted from more than 1 water licence—only 1 of the water licences; and
- (b) that is in a trading zone for groundwater.

84D Nominal volumes for water allocations for water licences held by particular regional councils

- (1) The nominal volume for the water allocation converted from water licence 401310 held by the Lockyer Valley Regional Council is 60ML.
- (2) The nominal volume for the water allocation converted from water licences 66442G and 98268G held by the Lockyer Valley Regional Council is 10ML.

84E Nominal volumes—1 licence converted to 2 water allocations

- (1) This section applies if 1 water licence is converted to 2 water allocations (the *first water allocation* and the *second water allocation* respectively).
- (2) The nominal volume for the first water allocation is the volume, in megalitres, calculated by multiplying the irrigable area for the water licence by 2.
- (3) The nominal volume for the second water allocation is the volume, in megalitres, calculated by multiplying the irrigable area for the water licence by 4.

84F Nominal volumes—2 or more licences converted to 2 water allocations

- (1) This section applies if 2 or more water licences are converted to 2 water allocations (the *first water allocation* and the *second water allocation* respectively).
- (2) The nominal volume for the first water allocation is the volume, in megalitres, calculated by multiplying the combined irrigable area for the water licences by 2.
- (3) The nominal volume for the second water allocation is the volume, in megalitres, calculated by multiplying the combined irrigable area for the water licences by 4.

- (4) In this section—

combined irrigable area, for water licences, means the sum of the irrigable areas for the water licences.

84G Nominal volume—rounding down

If the nominal volume for a water allocation worked out under section 84E or 84F is not a whole number, the nominal volume for the water allocation must be rounded down to the nearest whole number.

[s 84H]

84H Priority group

- (1) A water allocation with a nominal volume decided under section 84E(2) or 84F(2) belongs to the medium priority A group.
- (2) A water allocation with a nominal volume decided under section 84E(3) or 84F(3) belongs to the low priority group.

84I Purpose to be stated for taking water

The purpose to be stated for taking water under a water allocation converted from a water licence must be—

- (a) for a water allocation mentioned in section 84D—‘urban’; or
- (b) otherwise—‘any’.

84J Management of water allocations

Water allocations converted from water licences under this division are managed under the resource operations licence for the Central Lockyer Valley water supply scheme.

Subdivision 3 Working out irrigable area

84K Working out irrigable area

The *irrigable area* for a water licence is the area, in hectares, that is the total of—

- (a) the preliminary irrigable area for the water licence worked out under section 84L; and
- (b) if an additional irrigable area for the water licence is worked out under section 84M—the area worked out.

Note—

The irrigable area for a water licence is held in digital electronic form by the department and can be made available on request to the chief executive.

84L Working out preliminary irrigable area

- (1) This section applies in relation to the land attached to a water licence on the commencement.
- (2) The *preliminary irrigable area* for the water licence is the area, in hectares, that is the sum of each of the following parts of the land—
 - (a) if the licence allows the whole of a parcel of land to be irrigated using water taken under the licence—the part of the land that the chief executive decides, having considered geological mapping and spatial imagery of the land, is—
 - (i) land with alluvium; or
 - (ii) land without alluvium that has been irrigated, during the relevant period, using water taken under the licence from the land;
 - (b) if the licence allows only a part of a parcel of land to be irrigated using water taken under the licence—the part of the land.
- (3) However, the *preliminary irrigable area* for the water licence does not include the area of any part of the land attached to the water licence that has been included in the preliminary irrigable area of another water licence.

84M Working out additional irrigable area

- (1) This section applies if—
 - (a) the holder of a water licence to which section 84B applies makes a submission under the Act, section 72 about the draft water entitlement notice mentioned in section 84B; and
 - (b) the submission states that—
 - (i) land (the *relevant land*), owned by the licence holder but not attached to the water licence, was irrigated during the relevant period using

- groundwater taken from land attached to the water licence; and
 - (ii) the groundwater was taken from the Central Lockyer Valley water supply scheme using works located on land attached to the water licence; and
 - (iii) the groundwater was conveyed to the relevant land using a pipeline or channel; and
- (c) the area of the relevant land has not been included in the additional irrigable area for another water licence.
- (2) The *additional irrigable area* for the water licence is the total area, in hectares, of the relevant land, or the part of the relevant land, that the chief executives decides was irrigated during the relevant period in the way described in subsection (1)(b).

Part 7 Strategies for achieving outcomes (overland flow water)

85 Applications for water licences to take overland flow water must not be accepted

For section 43(2)(j) of the Act, the chief executive must not accept an application for a water licence to take overland flow water made under section 107 of the Act.

86 Limitation on taking overland flow water—Act, s 101

- (1) For section 101(1) of the Act, a person must not take overland flow water to which this plan applies under section 101(1)(b) of the Act, unless the water is taken—
- (a) for stock or domestic purposes; or
 - (b) under a water licence; or
 - (c) for another purpose using works that have a capacity of not more than 5ML; or

-
- (d) for a purpose the chief executive reasonably considers is for water sensitive urban design; or
 - (e) to satisfy the requirements of—
 - (i) an environmental authority under the *Environmental Protection Act 1994*; or
 - (ii) a development permit for carrying out an environmentally relevant activity, other than a mining activity or petroleum activity, under the *Environmental Protection Act 1994*; or
 - (f) under an authority under section 87.
- (2) For subsection (1)(e), the volume of overland flow water taken must not be more than the amount necessary to satisfy the requirements of the environmental authority or development permit.
- (3) In this section—
water sensitive urban design means urban planning or design that includes integrated water cycle management.

87 Taking water using particular existing overland flow works authorised

- (1) This section applies to the owner of land on which existing overland flow works are situated, other than works for only taking water that may be taken under section 86(1)(a) to (e).
- (2) The owner is authorised to continue to use the existing overland flow works to take overland flow water.

88 Notification of reconfiguration of existing overland flow works

- (1) This section applies to an owner of land authorised to use existing overland flow works to take overland flow water under section 87.

[s 89]

- (2) If the owner reconfigures the works, the owner must give the chief executive notice, in the approved form, about the reconfiguration.
- (3) If the owner gives the notice mentioned in subsection (2) to the chief executive, and any further information the chief executive reasonably requires, the owner may continue to use the works to take overland flow water.

Part 8 Accounting period

89 Accounting period for resource operations licences—Water Regulation 2016, s 142

For the *Water Regulation 2016*, section 142(a), the accounting period for a resource operations licence to take water from the Central Lockyer Valley water supply scheme is 1 January to 31 December.

Part 9 Monitoring and reporting requirements

90 Monitoring and reporting requirements

- (1) To help the Minister assess the effectiveness of the management strategies for achieving the outcomes mentioned in part 3, the water management protocol must state—
 - (a) the monitoring requirements for water and natural ecosystems for this plan; and
 - (b) the reporting requirements for this plan for operators of infrastructure interfering with water in the plan area.
- (2) Also, a monitoring requirement for this plan is to monitor the pressure and levels of groundwater in the plan area.
- (3) Subsections (1) and (2) do not limit the monitoring requirements the chief executive may impose for this plan.

Part 10 **Implementing and amending this plan**

94 Priority areas for converting to, or granting, water allocations

Each area described in schedule 13 is a priority area for this plan for the conversion to, or granting of, water allocations to take water in the plan area.

95 Implementation schedule

- (1) This section states the proposed arrangements for implementing this plan.
- (2) Within 4 years after the commencement, it is proposed to amend this plan—
 - (a) to convert authorisations in the priority area to water allocations; and
 - (b) to deal with unallocated surface water available for future water requirements in the priority area.
- (3) Within 4 years after the commencement, it is proposed to amend—
 - (a) the water management protocol to make water allocation change rules; and
 - (b) each resource operations licence that relates to the priority area—
 - (i) to make environmental management rules; and
 - (ii) to implement the monitoring requirements in part 9 for the priority area; and
 - (c) the operations manual required under each resource operations licence that relates to the priority area to make—
 - (i) water sharing rules; and
 - (ii) seasonal water assignment rules.

- (4) Subsections (2) and (3) do not limit the matters that may be included in the water management protocol.

96 Minor or stated amendment of plan—Act, s 51

The following types of amendment may be made to this plan under section 51(2)(a) of the Act—

- (a) an amendment or addition of an environmental flow objective if the amendment or addition achieves an equivalent or improved ecological outcome without adversely affecting the water allocation security objectives or the outcomes under part 3;
- (b) an amendment or addition of a water allocation security objective if the amendment or addition does not adversely affect existing water allocations, environmental flow objectives or the outcomes under part 3;
- (c) an amendment or addition of a priority area;
- (d) an amendment or addition of a node;
- (e) an amendment or addition of a priority group;
- (f) an amendment or addition of a water allocation group;
- (g) an amendment to subdivide a subcatchment area or amalgamate subcatchment areas;
- (h) an amendment to the boundary of a groundwater management area;
- (i) an amendment to the boundary of an implementation area;
- (j) an amendment to subdivide an implementation area or amalgamate implementation areas;
- (k) an amendment to the boundary, or the addition, of a watercourse buffer zone;
- (l) an amendment to subdivide a volume, or amalgamate volumes, stated in schedule 10;

- (m) an amendment of the type of water entitlement that may be granted for town water supply purposes;
- (n) an amendment or addition of a monitoring or reporting requirement under part 9.

97 Amending or replacing plan

The Minister must consider amending this plan or preparing a new plan to replace this plan if the Minister is satisfied—

- (a) in relation to the outcomes mentioned in part 3—
 - (i) water entitlements in the plan area are not sufficient to meet water needs sourced from the plan area having regard to—
 - (A) the extent to which water is being taken under the water entitlements; and
 - (B) the efficiency of present, and expected future, water use; and
 - (C) emerging requirements for additional water; and
 - (D) alternative water sources including, for example, recycled water and water savings from improvements in the efficiency of water use; and
 - (E) the likely timeframe in which additional water will be required; and
 - (ii) there are economically viable and ecologically sustainable uses for additional water; or
- (b) the plan is inconsistent with the SEQ regional plan.

Part 11 **Transitional provisions**

98 **Transitional provision for Water Plan (Moreton) (Warrill Valley Water Supply Scheme) Amendment Plan 2020**

Section 47(5), as amended by the *Water Plan (Moreton) (Warrill Valley Water Supply Scheme) Amendment Plan 2020*, is taken to have applied from 13 December 2019.

Surface water trading zones in plan area other than Central Lockyer Valley water supply scheme

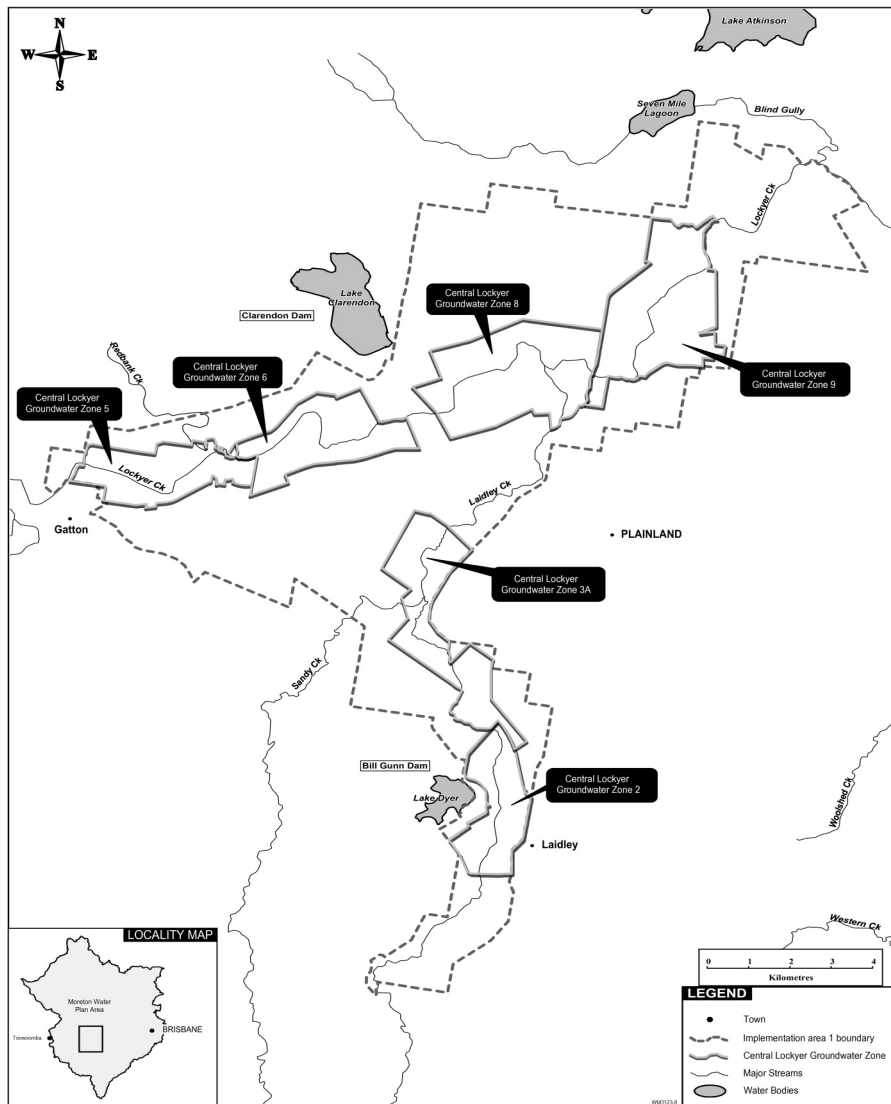

Part 2 Surface water trading zones in the Central Lockyer Valley water supply scheme

Part 3

Groundwater trading zones in the Central Lockyer Valley water supply scheme

Schedule 6 Nodes

section 8

Column 1	Column 2
Node	Location
A	Pumicestone Creeks at end of system (AMTD 0.0km)
B	Caboolture River at end of system (AMTD 0.0km)
C	Pine River at end of system (AMTD 0.0km)
D	South Pine River at North Pine River confluence (AMTD 8.0km)
E	Brisbane River end of system (AMTD 0.0km)
F	Bremer River at Brisbane River confluence (AMTD 72.9km)
G	Lockyer Creek at O'Reillys Weir GS143207A (AMTD 1.4km)
H	Stanley River at Woodford Weir inflow (AMTD 64.0km)

Schedule 7 Environmental flow objectives

section 15

Part 1 Low flow objectives

- 1 At each node mentioned in table 1, column 1, the 50% daily flow for the pre-development flow pattern for a water flow season is stated in column 2 of the table.

Table 1

Column 1	Column 2			
Node	50% daily flow in megalitres			
	Feb–April water flow season	May–July water flow season	Aug–Nov water flow season	Dec–Jan water flow season
A	201	144	56	54
B	136	87	34	36
C	225	105	52	102
D	48	23	11	22
E	1,588	844	582	1,092
F	155	90	72	147
G	130	67	47	90
H	164	82	39	55

- 2 At each node mentioned in table 2, column 1, the percentage of the total number of days in a water flow season in the simulation period that the 50% daily flow for the plan scenario flow pattern stated for the water flow season in table 1 is equalled or exceeded be at least the percentage stated in column 2 of the table for the water flow season.

Table 2

Column 1	Column 2			
Node	Feb–April water flow season	May–July water flow season	Aug–Nov water flow season	Dec–Jan water flow season
A	46	45	35	42
B	29	26	27	36
C	25	19	15	26
D	45	42	30	41
E	25	18	12	20
F	32	26	20	32
G	17	14	5	13
H	46	43	33	43

- 3 At each node mentioned in table 3, column 1, the 90% daily flow for the pre-development flow pattern for a water flow season is stated in column 2 of the table.

Table 3

Column 1	Column 2			
Node	90% daily flow in megalitres			
	Feb–April water flow season	May–July water flow season	Aug–Nov water flow season	Dec–Jan water flow season
A	7	38	6	0
B	1	15	2	0
C	31	30	14	14
D	7	6	2	3
E	318	277	191	261
F	48	36	29	38

Column 1	Column 2			
Node	90% daily flow in megalitres			
	Feb–April water flow season	May–July water flow season	Aug–Nov water flow season	Dec–Jan water flow season
G	17	12	7	11
H	17	21	9	5

- 4 At each node mentioned in table 4, column 1, the percentage of the total number of days in a water flow season in the simulation period that the 90% daily flow for the plan scenario flow pattern stated for the water flow season in table 3 is equalled or exceeded be at least the percentage stated in table 4, column 2, for the water flow season.

Table 4

Column 1	Column 2			
Node	Feb–April water flow season	May–July water flow season	Aug–Nov water flow season	Dec–Jan water flow season
A	83	85	66	59
B	84	83	79	76
C	71	55	42	61
D	77	71	47	62
E	51	34	31	49
F	58	51	47	60
G	24	18	8	19
H	79	75	57	65

- 5 At each node mentioned in table 5, column 1, the percentage of the total number of days in the simulation period on which the daily flow is less than 1ML be between the minimum and

maximum percentages stated for the node in column 2 of the table.

Table 5

Column 1	Column 2
Node	Minimum–maximum percentage
A	5–23
B	7–17
C	0–13
D	3–28
E	0–2
F	0–2
G	0–76
H	0–20

- 6 At each node mentioned in table 6, column 1, minimise the extent to which—
- (a) the number of periods of no flow of at least 1 month but less than 3 months in the simulation period is less than the minimum or more than the maximum number stated for the node in column 2 of the table; and
 - (b) the number of periods of no flow of at least 3 months but less than 6 months in the simulation period is less than the minimum or more than the maximum number stated for the node in column 3 of the table; and
 - (c) the number of periods of no flow of at least 6 months in the simulation period is less than the minimum or more than the maximum number stated for the node in column 4 of the table.

Table 6

Column 1	Column 2	Column 3	Column 4
Node	Minimum–maximum	Minimum–maximum	Minimum–maximum
A	4–67	—	—
B	4–25	—	—
C	0–16	0–1	0–0
D	1–70	—	—
E	0–2	0–1	0–0
F	0–2	0–1	0–0
G	0–112	0–46	0–46
H	2–45	0–16	0–3

Part 2 Medium to high flow objectives

At each node mentioned in table 7, column 1—

- (a) the annual proportional flow deviation (the *APFD*) be no greater than the APFD stated for the node in column 2 of the table; and
- (b) the mean annual flow (the *MAF*), expressed as a percentage of the MAF for the pre-development flow pattern, be at least the percentage stated for the node in column 3 of the table; and
- (c) the 1.5 year daily flow volume (the *1.5 year DFV*), expressed as a percentage of the 1.5 year DFV for the pre-development flow pattern, be at least the percentage stated for the node in column 4 of the table; and
- (d) the 5 year daily flow volume (the *5 year DFV*), expressed as a percentage of the 5 year DFV for the pre-development flow pattern, be at least the percentage stated for the node in column 5 of the table; and

Schedule 7

- (e) the 20 year daily flow volume (the **20 year DFV**), expressed as a percentage of the 20 year DFV for the pre-development flow pattern, be at least the percentage stated for the node in column 6 of the table; and
- (f) the flow regime class be maintained as late summer flow regime class.

Table 7

Column 1	Column 2	Column 3	Column 4	Column 5	Column 6
Node	APFD	MAF%	1.5 year DFV%	5 year DFV%	20 year DFV%
A	—	96	97	—	—
B	2.5	84	—	—	—
C	—	66	—	—	—
D	2.5	81	82	93	95
E	—	66	—	—	—
F	—	81	—	—	—
G	2.5	68	68	82	94
H	—	95	96	—	—

Schedule 8 Water allocation security objectives

section 17

Part 1 Supplemented water

- 1 For water allocations in high priority A group—
 - (a) the monthly supplemented water sharing index be at least 95%; and
 - (b) the extent to which it is less than 100% be minimised.
- 2 For water allocations in high priority B group—
 - (a) the monthly supplemented water sharing index be at least 85%; and
 - (b) the extent to which it is less than 90% be minimised.
- 3 For water allocations in high priority C group—
 - (a) the monthly supplemented water sharing index be at least 75%; and
 - (b) the extent to which it is less than 85% be minimised.
- 4 For water allocations in a medium priority group in the Central Brisbane River water supply scheme—
 - (a) the monthly supplemented water sharing index be at least 90%; and
 - (b) the extent to which it is less than 95% be minimised.
- 5 For water allocations in a medium priority group in Laidley Creek in the Central Lockyer Valley water supply scheme, the monthly supplemented water sharing index be not less than 35%.
- 6 For water allocations in a medium priority group in Lockyer Creek in the Central Lockyer Valley water supply scheme, the

monthly supplemented water sharing index be not less than 45%.

- 6A For water allocations in a medium priority group on Morton Vale Pipeline in the Central Lockyer Valley water supply scheme, the monthly supplemented water sharing index be not less than 76.7%.
- 6B For water allocations in a high priority group on Morton Vale Pipeline in the Central Lockyer Valley water supply scheme, the monthly supplemented water sharing index be not less than 87.5%.
- 7 For water allocations in a medium priority group in the Lower Lockyer Valley water supply scheme, the extent to which the monthly supplemented water sharing index is less than 65% be minimised.
- 8 For water allocations in a medium priority group in the Warrill Valley water supply scheme, the extent to which the monthly supplemented water sharing index is less than 45% be minimised.

Part 2 Unsupplemented water

- 1 For water allocations in a class A water allocation group in a subcatchment area mentioned in table 1, column 1, the 70% unsupplemented water sharing index for the group be at least the percentage stated, for the subcatchment area, in column 2 of the table.
- 2 For water allocations in a class B water allocation group in a subcatchment area mentioned in table 1, column 1, the 70% unsupplemented water sharing index for the group be at least the percentage stated, for the subcatchment area, in column 3 of the table.
- 3 For water allocations in a class C water allocation group in a subcatchment area mentioned in table 1, column 1, the 70% unsupplemented water sharing index for the group be at least the percentage stated, for the subcatchment area, in column 4 of the table.

- 4 For water allocations in a class D water allocation group in a subcatchment area mentioned in table 1, column 1, the 70% unsupplemented water sharing index for the group be at least the percentage stated, for the subcatchment area, in column 5 of the table.
- 5 For water allocations in a class E water allocation group in a subcatchment area mentioned in table 1, column 1, the 70% unsupplemented water sharing index for the group be at least the percentage stated, for the subcatchment area, in column 6 of the table.

Table 1

Column 1	Column 2	Column 3	Column 4	Column 5	Column 6
Subcatchment area	70% UWSI—%	70% UWSI—%	70% UWSI—%	70% UWSI—%	70% UWSI—%
1	87	—	90	95	90
2	89	—	90	—	97
3	82	—	88	97	97
4	85	—	89	—	—
5	90	—	89	—	97
6	81	78	73	—	75
7	89	84	88	—	—
8	84	—	85	—	—
9	86	—	92	—	97
10	82	—	81	—	97
11	84	—	87	—	97

Part 3 Groundwater

Division 1 Medium priority group

- 1 For water allocations, in a medium priority group, to take groundwater from an area in a trading zone for groundwater mentioned in table 2, column 1, the maximum allowable volume for the zone be the volume stated in column 2 of the table for the zone.

Table 2

Column 1	Column 2
Zone	Maximum allowable volume
Central Lockyer groundwater zone 2	799ML
Central Lockyer groundwater zone 3A	1,267ML
Central Lockyer groundwater zone 5	927ML
Central Lockyer groundwater zone 6	2,232ML
Central Lockyer groundwater zone 8	2,529ML
Central Lockyer groundwater zone 9	1,778ML

Division 2 Low priority group

- 1 For water allocations, in a low priority group, to take groundwater from an area in a trading zone for groundwater mentioned in table 3, column 1, the maximum allowable volume for the zone be the volume stated in column 2 of the table for the zone.

Table 3

Column 1	Column 2
Zone	Maximum allowable volume
Central Lockyer groundwater zone 2	1,484ML
Central Lockyer groundwater zone 3A	2,522ML
Central Lockyer groundwater zone 5	1,865ML
Central Lockyer groundwater zone 6	4,474ML
Central Lockyer groundwater zone 8	5,069ML
Central Lockyer groundwater zone 9	3,563ML

Schedule 10 Volumes for simulated mean annual diversions

section 49

Column 1	Column 2	Column 3	Column 4	Column 5	Column 6
Subcatchment area	Volume in megalitres	Volume in megalitres	Volume in megalitres	Volume in megalitres	Volume in megalitres

Schedule 11 Rates and pump sizes

sections 52 and 58

Column 1	Column 2
Pump size (mm)	Rate (litres/second)
32	8
40	13
50	25
65	46
80	50
100	85
125	120
150	150
200	190
250	220
300	300
350	350
400	440

Schedule 12 Watercourse buffer zones

section 81

Column 1	Column 2	Column 3
Watercourse or lake	Reach	Setback distance in metres
Brisbane River	Mt Crosby Weir (AMTD 90.8km) to Wivenhoe Dam wall (AMTD 150.2km)	100
Brisbane River	upstream of full supply level of the impoundment of Wivenhoe Dam ^a to the confluence with Cooyar Creek (AMTD 296.6km)	100
Caboolture River	Caboolture Weir (AMTD 20.3km) to Litherlands Road Crossing over Caboolture River (AMTD 33km)	100
Kilcoy Creek	upstream of full supply level of the impoundment of Somerset Dam ^b to confluence with west branch of Kilcoy Creek (AMTD 34.7km)	100
Lake Somerset	full supply level of the impoundment of Somerset Dam	100
Lake Wivenhoe	full supply level of the impoundment of Wivenhoe Dam	100
Sandy Creek (parish of Kilcoy)	upstream of full supply level of the impoundment of Somerset Dam to the confluence with Cedar Creek	100
Sheep Station Creek (parish of Kilcoy)	Sheep Station Creek (AMTD 0.0km) to the confluence with the east branch and west branch of Sheep Station Creek (AMTD 23.3km)	100

Column 1	Column 2	Column 3
Watercourse or lake	Reach	Setback distance in metres
Stanley River	upstream of full supply level of the impoundment of Somerset Dam to Peachester Road bridge (AMTD 95km)	100
Wararba Creek	Wararba Creek (AMTD 0.0km) to Moodlu (AMTD 5.4km)	100

-
- a Full supply level of the impoundment of Wivenhoe Dam is RL 67.00m AHD
- b Full supply level of the impoundment of Somerset Dam is RL 99.00m AHD

Schedule 13 Priority areas

section 94

1 Priority area

The *priority area* is the area of—

- (a) Boobir Creek Dam (including the ponded area) on Boobir Creek at AMTD 4.0km; and
- (b) Caboolture River at AMTD 20.3km to the top of the river, including—
 - (i) Caboolture Weir (including the ponded area) on Caboolture River at AMTD 20.3km; and
 - (ii) Wararba Creek Weir (including the ponded area) on Wararba Creek at AMTD 2.0km; and
- (c) Kilcoy Weir (including the ponded area) on Kilcoy Creek at AMTD 16.3km; and
- (d) McCauley Weir (including the ponded area) on Cooyar Creek at AMTD 25.9km; and
- (e) the Stanley River water supply scheme consisting of the full supply level of the impoundment of Somerset Dam on the Stanley River; and
- (f) the Stanley River and its subcatchment area upstream of the Stanley River Water Supply Scheme; and
- (g) Ted Pukallus Weir (including the ponded area) on Cooyar Creek at AMTD 48.0km; and
- (h) Woodford Weir (including the ponded area) on Stanley River at AMTD 64.0km.

Schedule 14 Formula

sch 15, definition *annual proportional flow deviation*

$$APFD = \sum_{j=1}^p \frac{\sqrt{\sum_{i=1}^{12} \left(\frac{c_{ij} - n_{ij}}{\bar{n}_i} \right)^2}}{p}$$

where—

p = number of years

c_{ij} = modelled flow for month i in year j

n_{ij} = modelled natural flow for month i in year j

\bar{n}_i = mean natural flow for month i across p years

Schedule 15 Dictionary

section 3

1.5 year daily flow volume means the daily flow that has a 67% probability of being reached at least once a year.

5 year daily flow volume means the daily flow that has a 20% probability of being reached at least once a year.

20 year daily flow volume means the daily flow that has a 5% probability of being reached at least once a year.

50% daily flow, for a month, means the flow, in megalitres, that is equalled or exceeded on 50% of days in the month in the simulation period.

70% unsupplemented water sharing index, or **70% UWSI**, for a group of water allocations for taking unsupplemented water in a subcatchment area, means—

- (a) for the group of allocations in the subcatchment area converted from authorisations that stated the areas that may be irrigated—the percentage of the simulated mean annual diversion, for all those allocations, calculated to occur in at least 70% of years in the simulation period; and
- (b) for the group of other allocations in the subcatchment area—the percentage of the simulated mean annual diversion, for all those allocations, calculated to occur in at least 70% of years in the simulation period.

90% daily flow, for a month, means the flow, in megalitres, that is equalled or exceeded on 90% of days in the month in the simulation period.

additional irrigable area, for part 6, division 6, see section 84M.

adopted middle thread distance means the distance in kilometres, measured along the middle of a watercourse, that

a specific point in the watercourse is, at the commencement of this plan, from—

- (a) the watercourse's mouth; or
- (b) if the watercourse is not a main watercourse—the watercourse's confluence with its main watercourse.

allowable urban purpose, for taking groundwater, means—

- (a) taking the groundwater for developments that use water sensitive urban design; or
- (b) taking the groundwater for irrigating sporting fields or supplying the water to a toilet block, or for public amenity purposes, at a recreational or sporting facility; or
- (c) taking, by a local government, the groundwater for maintenance, to provide for public amenity purposes, to enhance public safety or for projects for which the local government has a water efficiency plan; or
- (d) taking the groundwater at an education institution if the use of the groundwater is not—
 - (i) for irrigation purposes; or
 - (ii) linked to a large scale research project.

AMTD means adopted middle thread distance.

annual proportional flow deviation, for a node, means the statistical measure of changes to flow season and volume in the simulation period, at the node, calculated using the formula in schedule 14.

annual variability, for a flow at a point in a watercourse, means the amount of change in the flow that happens between years.

annual volumetric limit, for an authorisation, means the maximum volume of water that may be taken under the authorisation in a water year.

authorisation means a water licence, water permit, interim water allocation or other authority to take water given under

the Act or the repealed Act, other than a permit for stock or domestic purposes.

class, of water allocation group to which a water allocation to take unsupplemented water belongs, means the class of water allocation to which the allocation belongs under section 54.

daily flow, for a node, means the volume of water that flows past the node in a day.

discharge, for a flow at a point in a watercourse, means the rate at which water passes the point, measured in cubic metres a second or megalitres a day.

ecological assets include a species, a group of species, a biological function, an ecosystem and a place of natural value.

existing overland flow works means—

- (a) works for taking overland flow water that—
 - (i) were in existence on the commencement of the *Water Plan (Moreton) (Supply Scheme Arrangements) Amendment Plan 2019*; or
 - (ii) were started, but not completed by the commencement of the *Water Plan (Moreton) (Supply Scheme Arrangements) Amendment Plan 2019*; or
- (b) works that—
 - (i) are a reconfiguration of existing overland flow works mentioned in paragraph (a); and
 - (ii) do not increase the average annual volume of water taken above the average annual volume taken using the existing works.

existing water bore—

1 **Existing water bore** means a water bore that—

- (a) is able to take groundwater; and
- (b) either—
 - (i) was in existence on 24 March 2005; or

- (ii) was started, but not completed by 24 March 2005 and—
- (A) if a variation to a moratorium notice was granted for the bore under section 27 of the Act—has been, or is being, completed in accordance with the moratorium notice, as varied; or
- (B) if subparagraph (A) does not apply—was completed by 31 March 2006.

- 2 The term does not include a water bore that allows taking groundwater only for stock or domestic purposes.

Note—

See section 20 (Authorised taking of water without water entitlement) of the Act.

flow regime means the entire range of flows at a point in a watercourse including variations in the watercourse height, discharge, seasonality, annual variability and duration of a flow event.

flow regime class means the measure of flow regime seasonality worked out using the method stated in Haines, A.T., Finlayson, B.L. and McMahon, T.A., 'A global classification of river regimes. Applied Geography, 1988'.

groundwater means underground water.

groundwater management area means a groundwater management area under section 5(1).

groundwater unit means an aquifer in a multi-layered aquifer system that is not hydraulically connected to another aquifer either above or below it.

groundwater unit 1 see section 5(3)(a).

groundwater unit 2 see section 5(3)(b).

high priority A group means the water allocations in a water supply scheme that are stated to be high priority A group in the water allocations register.

high priority B group means the water allocations in a water supply scheme that are stated to be high priority B group in the water allocations register.

high priority C group means the water allocations in a water supply scheme that are stated to be high priority C group in the water allocations register.

high priority group means the water allocations in a water supply scheme that are stated to belong to the high priority group in the water allocations register.

hydraulic habitat requirements, of an ecological asset, are the biophysical conditions created by aspects of the flow regime that are—

- (a) required for a particular biological process or response to happen in relation to the asset; or
- (b) necessary to maintain the long-term biological integrity of the asset.

implementation area means an implementation area under section 5(2).

implementation area 1 see section 5(2)(a).

implementation area 2A see section 5(2)(b).

implementation area 2B see section 5(2)(c).

implementation area 3 see section 5(2)(d).

implementation area 4 see section 5(2)(e).

IQQM computer program means the department's Integrated Quantity and Quality Modelling computer program, and associated statistical analysis and reporting programs, that simulate daily stream flows, flow management, storages, releases, instream infrastructure, water diversions, water demands and other hydrologic events in the plan area.

irrigable area, for part 6, division 6, see section 84K.

irrigation purposes means any of the following purposes—

- (a) aquaculture;
- (b) dairying;

- (c) irrigation;
- (d) piggery;
- (e) stock or domestic purposes;
- (f) water harvesting.

low flow regime, for a watercourse, means the minimum flows that provide a continuous flow through the watercourse.

low priority group means the water allocations in a water supply scheme that are stated to belong to the priority group in the water allocations register.

management area—

- (a) for part 6, division 2, see section 63; or
- (b) for part 6, division 3, see section 66; or
- (c) for part 6, division 4, see section 76.

maximum allowable volume, for a zone, means the total volume of supplemented groundwater that may be taken under all water allocations to take supplemented groundwater in the zone.

mean annual flow, for a node, means the total volume of flow, at the node, in the simulation period divided by the number of years in the simulation period.

medium priority A group means the water allocations in a water supply scheme that are stated to belong to the medium priority A group in the water allocations register.

medium priority B group means the water allocations in a water supply scheme that are stated to belong to the medium priority B group in the water allocations register.

medium priority C group means the water allocations in a water supply scheme that are stated to belong to the medium priority C group in the water allocations register.

medium priority group means the water allocations in a water supply scheme that are stated to be medium priority group in the water allocations register.

monthly supplemented water sharing index, for water allocations in a water supply scheme, means the percentage of months in the simulation period in which the allocations are fully supplied.

node see section 8.

period of no flow, for a node, means a period in which the flow of water in the watercourse at the node is less than 1ML a day.

plan area means the area shown as the plan area on the map in schedule 1.

plan scenario flow pattern means the pattern of water flows, during the simulation period, decided by the chief executive using the IQQM computer program as if—

- (a) all unallocated water in the strategic reserve and general reserve is being taken; and
- (b) the maximum volume allowed to be taken under each authorisation in the plan area is being taken.

pre-development flow pattern means the pattern of water flows, during the simulation period, decided by the chief executive using the IQQM computer program as if—

- (a) there were no dams or other water infrastructure in the plan area; and
- (b) no water was taken under authorisations in the plan area.

preliminary irrigable area, for part 6, division 6, see section 84L.

priority area see section 94.

priority area see schedule 13, section 1.

related development permit, for an authorisation, means the development permit for the works for taking water under the authorisation.

relevant period, part 6, division 6, see section 84A.

seasonality, for a flow at a point in a watercourse, means the time of year when the flow happens.

SEQ regional plan means the regional plan under the Planning Act for the region named the SEQ region under the *Planning Regulation 2017*.

simulated mean annual diversion, for a water allocation or group of water allocations, means the total volume of water simulated to have been taken under the allocation or group, if the allocation or group were in existence for the whole of the simulation period, divided by the number of years in the simulation period.

simulation period means the period from 1 July 1889 to 30 June 2000.

started, for an existing water bore or existing overland flow works, means—

- (a) construction of the bore or works had physically begun or, if construction had not physically begun, a contract had been entered into to begin construction; and
- (b) an independently verifiable construction program existed for progressive construction towards completion of the bore or works; and
- (c) detailed design plans existed showing, among other things, the extent of the bore or works; and
- (d) if a permit under the *Local Government Act 1993*, section 940, was required for the bore or works—the permit had been issued; and
- (e) if a development permit was required for the bore or works—the permit had been given.

subcatchment area see section 6.

supplemented groundwater means groundwater that is recharged by water supplied under a resource operations licence or other authority to operate water infrastructure.

supplemented groundwater area, for groundwater unit 1 in an implementation area, means the part of the groundwater unit in the implementation area that contains supplemented groundwater.

supplemented water means surface water supplied under a resource operations licence or other authority to operate water infrastructure.

surface water see section 9(1).

traditional owners, of an area, means the Aboriginal people who identify as descendants of the original inhabitants of the area.

unsupplemented groundwater means groundwater that is not supplemented groundwater.

unsupplemented groundwater area, for groundwater unit 1 in an implementation area, means the part of the groundwater unit in the implementation area that does not contain supplemented groundwater.

unsupplemented water means surface water that is not supplemented water.

watercourse buffer zone see section 81.

water flow season means any of the following periods in a year—

- (a) the period from 1 February to 30 April (**Feb–April water flow season**);
- (b) the period from 1 May to 31 July (**May–July water flow season**);
- (c) the period from 1 August to 30 November (**Aug–Nov water flow season**);
- (d) the period from 1 December to 31 January (**Dec–Jan water flow season**).

water management protocol means a water management protocol made to implement this plan.

water sensitive urban design means design that integrates the management of the water cycle into urban design to—

- (a) minimise the effects of development on the water cycle and the environment; and
- (b) address matters related to the supply and use of the water.
